Once the power adaptor is connected to a power source, it will automatically begin charging (8 hours to fully charge the battery) Even if the battery power is low, it will power on when connected to a power source. When the battery is charging, the battery indicator light is red. When the battery charge fully, the indicator light will turn off. Upon completion of the charging, please disconnect the unit. When not in use, the speaker should always be set OFF to prevent the unit from draining the battery. When the unit is not used for prolonged periods of time, the battery will gradually lose its power. It is recommended to fully charge the battery at least every 60 days. When battery is completely empty, the unit cannot perform at 100% of the volume when immediately connected to power source. It is suggested to charge for a while before using with 100% volume. The unit may work and charge with lower-level volume. The volume level would be increased as the unit is charging.

BATERÍA

El MPX-8282 es un altavoz con batería recargable. Asegúrese de cargar completamente la batería antes del primer uso para maximizar su vida útil. Una vez conectado el adaptador de corriente a una fuente de alimentación, comenzará a cargarse automáticamente (8 horas para una carga completa). Incluso con poca carga, se encenderá al conectarlo a una fuente de alimentación. El indicador de batería se ilumina en rojo durante la carga. Cuando la batería esté completamente cargada, el indicador se apagará. Al finalizar la carga, desconecte el altavoz. Cuando no esté en uso, el altavoz debe estar siempre APAGADO para evitar que se agote la batería. Si no se utiliza durante periodos prolongados, la batería se irá descargando gradualmente. Se recomienda cargar la batería por completo al menos cada 60 días. Cuando la batería esté completamente descargada, el altavoz no podrá funcionar al 100% del volumen al conectarlo inmediatamente a una fuente de alimentación. Se recomienda cargarlo durante un tiempo antes de usarlo al 100% del volumen. Es posible que funcione y se cargue a un volumen menor. El nivel de volumen aumentará mientras la unidad se está cargando.
